

Davenport Residence

CONCEPTUAL DESIGN TO INSTALLATION DAVENPORT, CA

This craftsman style home is situated at one of the highest points in the town of Davenport. From picture frame windows once can see a gorgeous canyon vista, ocean views and California native and pollinator attracting gardens.

ECI worked with the homeowner from conceptual design all the way through construction completion. Our native plants nursery, Central Coast Wilds, provided the native plants for this coastal landscape. Featured plants are lupine, coffee berry, salvia, grasses, ceanothus and more.

The landscape design reflected the homeowners desires to have a native

landscape that drew in pollinators and seamlessly connected their landscape to the canyon. The landscape features French garden inspired veggie beds, an enhanced deck viewing area, flagstone pathways, elegant retaining walls for hillside stabilization, and a dry creek bed which reduced water run-off. ECI also installed a custom irrigation system with solar synch and weather sensors to ensure for proper plant establishment and survival.

All planting is WUCOLS low water approved, and irrigation is to be turned off once all plants have become established. All materials used were locally sourced.

Above: Freshly planted gardens, custom woodwork and hardscape.

Right: Custom raised vegetable beds in a French Garden aesthetic.
